Comparative Metrics

Company	Price Trend (1Y)	Market Cap	PE Ratio (TTM)	Key Performance Indicators	Recent News
Apple	+50.6%	\$4.64T	38.3	ROE 141%, Net Income \$122.6B, FCF \$129.1B	\$30B chip deal with Broadcom, strong PC shipments
Microsoft	-22.6%	\$2.86T	22.8	ROE 34%, Net Income \$125.2B, FCF \$72.9B	Heavy AI investments (\$2.5B unit), restructuring in gaming division
Tesla	+36.5%	\$1.53T	395.3	ROE 4.9%, Net Income \$3.9B, FCF \$7B	Robotaxi expansion, concerns over growth forecasts

Key Observations

- Apple:** Strong profitability, massive cash reserves, and innovation pipeline. Valuation is high but justified by fundamentals.

- **Microsoft:** Despite recent declines, fundamentals remain solid. Lower PE ratio suggests relative undervaluation.
- **Tesla:** Extremely high PE ratio indicates speculative pricing. Thin margins but strong growth narrative keeps investor interest alive.

Conclusion

- **Apple** is the most stable performer with strong fundamentals and innovation.
- **Microsoft** offers value potential given its lower PE and strong balance sheet, though short-term sentiment is weak.
- **Tesla** remains high-risk, high-reward: speculative valuation but growth optimism in autonomous driving.
